Faunistic and systematic notes

**Hypotia infulalis* Lederer, 1858

The species is widespread in the Mediterranean region and is known from Turkey (Leraut 2014). The northernmost find.

**Psorosa* sp. (*marashella* sp. group)

An unidentified species from the *marashella* group, possibly new to science, additional materials and research are required.

**Ceutholopha isidis* (Zeller, 1867)

The species is distributed in Africa, the Middle East, and is locally occurring in Great Britain and Corsica (Leraut 2014). Relatively recently, the species was discovered in Turkey (Akin 2018). The most northeastern records.
