Introduction

The beetle fauna of the Omsk region has not been studied enough and is very fragmentary. The first data on the beetles of the region (mainly in the vicinity of Omsk) we can find in the work of S.D. Lavrov (Lavrov 1927), where 41 species of longicorn beetles are presented. T.F. Kosheleva mentions 20 species of longicorn beetles from the collection of the Omsk State Museum of local history (Kosheleva 2003), but in a general way, without indicating the label data and the number of specimens. In addition, the definitions of some specimens needed to be clarified. One species – *Purpuricenus globucilollis* Mulsant, 1839 was included in the local Red Book (Knyazev et al. 2015) as *Purpuricenus kaehlerii* Linnaeus 1758. All these materials were reprocessed by us, partially redetermined and included in the text of this work.

Material and methods

The article is based on materials collected by the authors in the period from the early 1980s to 2022. We collect specimens in all natural zones - from the taiga in the north to the steppes in the south of the Omsk region, with the maximum coverage of various biotopes (Figs 1–3). In addition, we have processed materials from the collections of the Institute of Systematics and Ecology of Animals of the Siberian Branch of the Russian Academy of Sciences (Novosibirsk), the Omsk State Museum of local history (Omsk), and fellow entomologists from the Omsk Region - O.N. Kholodov (Krasnyi Oktyabr`, Omsk Region) and A.A. Sal`nik (Ermak, Omsk Region).

The following abbreviations are used in the text for the places of storage of the collection material: ISEA - collection of the Institute of Systematics and Ecology of Animals of the Siberian Branch of the Russian Academy of Sciences (Novosibirsk); OGKM - collection of the Omsk State Museum of local history (Omsk); SKSS - collection of S.A. Knyazev and S.M. Saikina (Omsk); KPO - collection of K.B. Ponomarev (Omsk); VTO - collection of V.Yu. Teploukhov (Bolshie Uki, Omsk region); OKO - collection of O.N. Kholodov (Krasnyi Oktyabr`, Cherlak district, Omsk region); ASO - collection of A.A. Salnik (Ermak, Novovarshavsky district, Omsk region). Species firstly reported for the Omsk Region are marked by asterisk.
