Introduction

Crabronidae is distributed worldwide, except Antarctic and Arctic zones, mainly in tropical and subtropical regions. Crabronids, including 90 percentages of apoid wasps, is the largest group of insects among all families of wasps (Antropov et al. 2017).

There are 250 genera and 8900 species of crabronids in the world, in Palaearctic – 84 genera and 2000 species, in Azerbaijan 42 genera and 232 species (Antropov et al. 2017, Mokrousov et al.

2019, Mokrousov et al. 2020).

The collection materials of Crabronidae wasps presented at the following 16 species from seven Bembicinae genera. *Gorytes laticinctus* Lepeletier, 1832 are newly recorded from Caucasus and *Gorytes procrustes* Handlirsch, 1888 – from Azerbaijan.
